

## LETTER OF INTENT

During recent years the development of work-based learning (WBL) has been a priority of vocational education and training (VET) policy in the Baltic States and Europe. However, the main activities and improvements are focused on secondary level VET and there are minimal elements of WBL and quality assurance (EQAVET) in the next stages, including EQF level 5 VET.

By signing this Letter of Intent, partners declare to continue to promote and advance the developed intentions of the VET project across Europe. It is important to transfer the opportunities of dual education to other sectors based on the experience and best practices of this implemented project, therefore the signatories agree to share experiences and expand the awareness of dual education.

This further promotion should be achieved through various actions such as creating a sector skills alliance, guarantee a further exchange of experience and information, developing a European quality VET training programme that aims to improve the skills of the labour force in different sectors in the Baltic States as well as, where possible, in other European countries in the future and similar activities.
